

Precision requires assumptions as well as independent elections

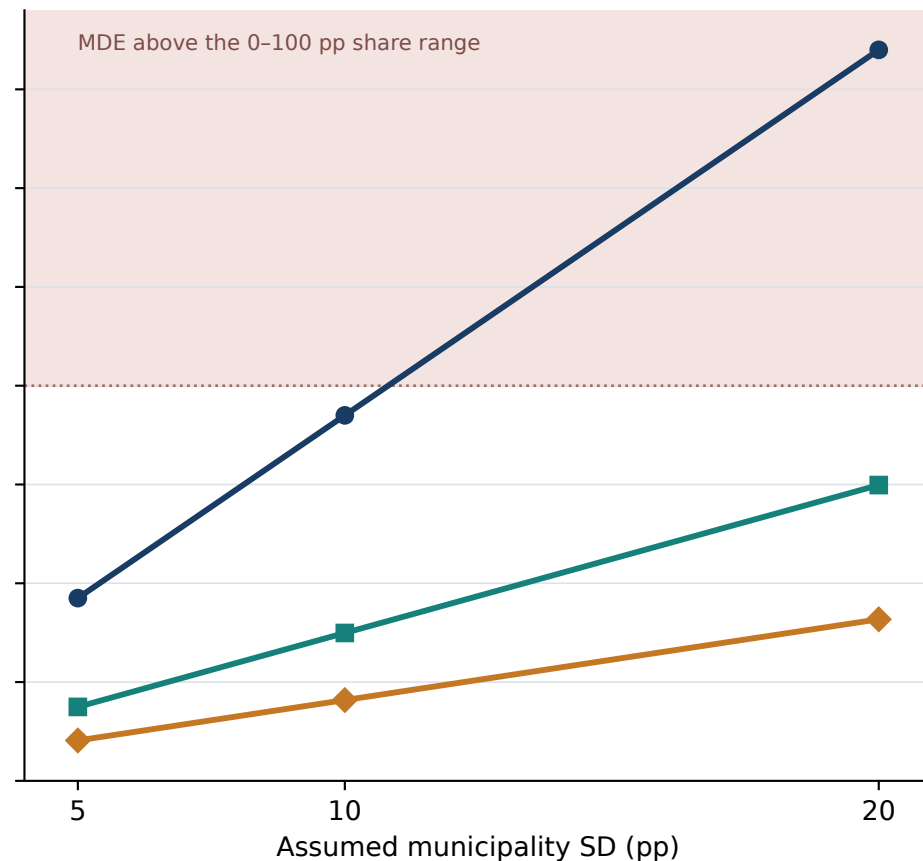

80% power · Gaussian equal-variance two-group t benchmark · no RDD power or effect estimate

- Confirmed NRW ≤ 2 pp (1 win / 3 losses)
- Conditional NRW maximum ≤ 2 pp (3 wins / 3 losses)
- Conditional NRW + named Bavaria maximum ≤ 2 pp (6 wins / 6 losses)

Per-test alpha 0.05

Per-test alpha 0.025

All scenarios assume usable outcomes; conditional maxima also require favorable unknown resolution and balance.

The SD grid is hypothetical; a bounded-share outcome does not exactly follow the Gaussian model.
